

Testimonial Raquel Ojeda (Mexico) 2

Servus! Hola! Hi, I'm Raquel, 25 years old and a master's student in my second semester.

If you're interested in starting to study the master's programme [Artificial Intelligence for Smart Sensors and Actuators](#), or any other study programme on Campus Cham, I will be so happy to help you to know more about the student life and share with you my best tips to get an amazing experience as a DIT student.

I'll be glad to hear from you.

- I'm from: Mexico
- I speak: English, Spanish, German
- How to reach me: ask-kim-cham-student@th-deg.de

Here you'll find the most important information about DIT in Spanish: [Bienvenido a DIT](#)

If you have any questions or need further assistance, please contact me by e-mail.

Why did I choose this study programme?

My passion of the robotics world started when I was 6 years old, and I have always wanted to develop something important to help the world to be a better place, until now we have a lot of changes into the technology, and through my bachelor I discovered an opportunity to enhance my passion with my abilities combining the AI with the robotics through the sensors and actuators.

My personal tip for you:

Be present in all the courses and try to involve yourself in the most activities that you can into your master's degree. If you constantly attend your courses, later you could have time to go on an excursion or party made by the university. It is not only to study and also not only to have fun, you need to find an equilibrium and enjoy the student life.

That's why you should study this course of studies:

This Master's programme offers you a lot of opportunities in the field, you'll receive good preparation with real cases and how to solve it in the industry environment, the university has professors with a high level of experience which is transmitted by their knowledge during the seminars. The content is uploaded with the most recent tools which also you'll use into a laboratory environment, getting in an easy way laboratory chances after successfully completing your Master's degree.

My best experience during my studies:

To have only the best experience is impossible, since I abroad on the university the friendly community, the new kind of seminars, laboratory experiments and more have made my Master's degree an amazing experience, but the best part of everything is to share my culture in different ways and learn from my friends their culture, expanded my mind with the knowledge of their cultures, and expanded my limits traveling to new cities and/or countries trying to get an efficient communications while I got a lot of fun.
