APPLIED SCIENCES FOR LIFE

Our objective is to breathe life into the concept of education for our students, not only by placing their training on a sound theoretical and practical basis, but also by supporting them along their own individual paths with commitment, expertise and a focus on personal development and career opportunities right from the outset.

We prepare our students for the world of work and start building bridges while they study – to companies, associations, institutions or research institutes.

OUR SENSE OF UNITY

From the introductory event to the graduation ceremony, from Maifest in Weihenstephan to the Kontur-Festival in Triesdorf: motivated specialist teaching staff, active students and attractive locations make for an exceptional campus atmosphere. Here, familiarity, trust and commitment create a unique sense of unity.

YOUR ADVANTAGES

Direct practical relevance

Practical relevance is the focus of every single one of our degree programmes – for optimal career preparation. Applied exercises, internships, projects, excursions, practical training semesters and work-study degree programmes make sure of that.

Intensive support and teaching

We promote intensive contact and exchange among the students themselves, but also with our qualified lecturers and professors. Suitably small group sizes provide closeness to the teaching staff: the key to individual knowledge transfer and support.

Outstanding conditions for study

We create the optimal conditions for comprehensive professional and practical training, from the library and many other university services through modern media technology to show gardens, test facilities, laboratories and equipment.

International opportunities

Whether for semesters, placements or internships abroad, we send our students to partner universities and companies around the world for project and dissertation work or for research projects.

Wide network

Excellent contacts with companies, research institutes and other universities combine industry, economy and teaching for successful cooperation, the best job opportunities and exceptional career paths.

Two campuses – one clear direction

No other university of applied sciences offers a comparable range of subjects in engineering degree programmes so consistently focussed on nature, humans and resources – from agricultural basic material production and the preparation of animal products, through all the relevant issues relating to nutrition and supply, to the development of rural and urban areas. The Weihenstephan-Triesdorf University of Applied Sciences is green, innovative and practical. At the Weihenstephan campus and the Triesdorf campus.

Shaping the future together

Climate protection, alternative energies and conservation of resources concern us all. Together with our students and graduates we want to secure the quality of life of future generations. Our unique focus on green technologies, first-class scientific and practical training and our deep sense of responsibility make studying at the Weihenstephan-Triesdorf University of Applied Sciences an outstanding educational experience: we teach life sciences for the future.
